https://chat.deepseek.com/share/0q3vjedl0iffyqgrqm can you access this link

16 Dec 2025

I'll fetch that link for you to see what's there.

Searched the web

Searched the web

I wasn't able to access that link because the site's robots.txt file blocks automated access to shared chat links. This is a technical restriction that prevents tools like mine from fetching content from DeepSeek's shared chat pages.

If you'd like to share the content from that conversation with me, you could:

- Copy and paste the relevant parts of the conversation here
- Take a screenshot and share it
- Describe what you're interested in from that chat

I'd be happy to help with whatever you wanted to discuss from that link!

no that wont work. and the conversation is so long that if i cut and paste it i'll use up all your available space.

16 Dec 2025

You're right that pasting a very long conversation could use up a lot of space. Here are a few alternatives we could try:

1. **Screenshot key parts**: You could take screenshots of the most important or relevant sections and share those with me - I can read text from images.
2. **Summarize the main points**: You could give me a brief overview of what the conversation was about and what specific aspects you're interested in discussing or getting help with.
3. **Share specific sections**: If there are particular parts of the conversation that are most relevant to what you need help with, you could paste just those sections.
4. **Download and upload**: If DeepSeek allows you to download the conversation as a file (like a text file or PDF), you could upload that file here - I can read uploaded documents without them taking up as much of our conversation space.

What would work best for you?

none of these unfortunatly. we to'd and fro'd so much and slipped around time lines so it wont even work for me, i would need to be all through the script and even then will miss important

qualifications i made. can i get a much bigger facility so that i could cut and paste the entire conversation

16 Dec 2025

I understand the challenge - you need the full context with all the qualifications and back-and-forth preserved.

Unfortunately, I don't have a way to give you more space in our conversation here. The context window I have is fixed, and even our current conversation is using that space.

However, here are some options that might actually work:

1. **Upload as a file**: If you can copy the entire DeepSeek conversation and save it as a text file (.txt) or document (.docx), you could upload it here. Uploaded files don't count against our conversation space in the same way - I can read them directly from the file system. This would preserve everything including all the nuances and qualifications.
2. **API access**: If you use Claude through the API instead of this chat interface, you'd have access to a much larger context window (up to 200k tokens with Claude Sonnet). But that requires technical setup and isn't as simple as this chat interface.

The file upload option (option 1) is probably your best bet. Can you copy the DeepSeek conversation text and save it as a .txt or .docx file, then upload it here? That should work without the space constraints you're worried about.

background for the man who became god.odt

odt

i'll try that.

16 Dec 2025

Perfect! Let me read through your uploaded file.
